

We Keep Things Moving at JFK Terminal One

BAE Took the Vision of Four International Airlines and Turned It Into Reality

BAE Automated Systems, Inc., took the vision of four international airline companies—Air France, Japan Airlines, Korean Air, and Lufthansa—that form the Terminal One Group Association, L.P., at New York's John F. Kennedy International Airport and created a baggage handling system for the 21st century.

With an expected initial load of 2,000 passengers per hour passing through Terminal One, the airlines needed a system that could deliver an integrated solution to screen and process up to 6,000 bags an hour. BAE Automated Systems provided them with the answer.

Heralded as "a fresh approach to baggage handling," the BAE system at Terminal One handles inbound and outbound baggage separately with a four-belt, separate-feed configuration for each. BAE's automated baggage handling system uniquely incorporates three levels of security screening with its conveyors, scanners, and software for a seamlessly integrated solution.

With over 30 years of experience, BAE has acquired the knowledge and vision it takes to provide baggage handling solutions that keep things moving better and faster than anyone else in the business.
