

# We Keep Things Moving

## At North America's Busiest Airports

BAE is the premier choice in automated baggage handling systems in North America. With more than 30 years of experience in the design, manufacture, installation, and maintenance of these systems, BAE leads the way in large-scale automatic baggage sorting and transport systems.

If you pass through any major hub in North America, your baggage probably moves on a BAE system.

### Detroit Midfield Terminal

Northwest Airlines has selected BAE to provide the baggage handling system for the new Detroit Midfield Terminal. Our experience with large-scale automatic sort systems made us the obvious choice for the largest baggage handling system in Northwest Airlines' 70-year history.

### San Francisco International

BAE is providing the baggage handling system for the new international terminal, using conventional conveyor and positive transfer sorting devices. The more than 25,000 feet of conveyor is supported by the most sophisticated seismic bracing ever utilized in a baggage system installation.

### JFK International Terminal One

BAE created the first 100 percent hold baggage screening system in North America at the new JFK Terminal One. Screening and processing up to 6,000 bags per hour, BAE's automated baggage handling system uniquely incorporates three levels of security screening with its conveyors, scanners, and software for a seamlessly integrated solution.
